Maths Average Progress	-1.86	-0.02	0.05
R,W,M at Expected %	68.6	56.2	58.7
R,W,M at Greater Depth %	9.8	5.1	7.3
Science Expected in %	90		79

A Scaled Score of 100 is seen as average.

A progress measure of 0 is expected. Below 0 is less than expected and above 0 is more than expected.

In reading and maths a child can have a scaled score of between 70 and 120. In reading and maths

the progress score is calculated by the target score against the actual score, for example, a target of 101 and an actual of 103 will give a +2 progress. The school score is calculated by all of the children added together and then divided by the number in the cohort.

In writing, there is a different way that the government work out the progress score. In this subject a child can only score 91 for below expected, 103 for expected and 113 for greater depth. A child whose target is, for example 107 (expected), and who achieves expected can only score 103, will have a -4 progress score, which skews the overall school score. Again all scores are added together, then divided by the cohort and a school score is achieved.
